Great Looks Don't Happen By Chance.... They Happen By Appointment.

A quick check through Instagram's #semipermanentmakeup, #permanentmakeup and #micropigmentation hashtags is all it takes to realise that cosmetic tattooing has made a comeback and is here to stay for a very long time. Hot off the heels of microblading's global success, treatments such as microfeathering and lip blushes, cosmetic tattooing offer the chance to kiss lengthy make-up routines goodbye, so that you can literally get up and go at any time.

Cosmetic tattooing is rapidly evolving with new techniques and procedures every month. Gone is the tattooing of yesteryear along with the use of solid block of colour that would last well over 10 years, these have now been replaced by topical methods that allow for fading and allow clients to alter the colour or shape every 12 to 18 months. We no longer use inks containing titanium dioxide that as the body broke down, left horrid tones of pink, green and blue, all replaced by the new generation of organic pigments.

UNDERSTANDING MY TECHNIQUES

Lashes

While semi-permanent eyeliner is popular, I prefer to use tiny micro-droplets of pigment nestled in between each lash, it gives the appearance of thick, fluttery lashes and creates undetectable eye definition.

The tattoo machine I use is incredibly gentle, it uses light vibrations, so feels more like an electric toothbrush. Even so, your eyes may feel sore afterwards, so lets not do it en route to a party. Like brows, they need to be kept dry for at least 48 hours afterwards.

Brows

Microblading (the catch-all phrase for individually tattooed hair strokes) is continuously spawning new techniques. I prefer the Microfeathering method in which native hair to fill-in gaps and sparsely covered areas, this results in the most natural look possible; and allows a perfect Ombre where the brow is slightly faded towards the front of the face with a sharper arch for added depth.

Lips

During this procedure I replace your lips lost border and gives them a more youthful appearance. It's also a great way to create the illusion of a fuller pout without injections, while leaving a beautiful hue so you don't need lipstick.

Lip blushes get their name thanks to using a dark shade around the lip line blended with a softer shade in the middle with almost no colour in the centre. Expect tenderness after the procedure.

Beauty Spots

Backstage artists such as Charlotte Tilbury and tanning guru Nichola Joss have been recreating sun-kissed freckles for the past few seasons and the new Duchess of Sussex "Markle Sparkle" has only increased the trend. They are inherently youthful and hey, what a great way to get freckles without sun damage.

My procedures ensures your desired result by drawing in the freckles and getting your prior approval before the procedure start.

Pain & Aftercare

Thanks to numbing creams, most clients say that most procedures feel similar to very light scratching. Typically there is no formal downtime and treated areas should be kept dry for at least two days. Don't panic if the tattoo looks too dark at first, colour fades as they heal and the results last for about a year.

Aftercare is minimal, simply refrain from touching treatments and apply your antiseptic cream as instructed. Protect the tattoo with a prudent showering technique to keep them dry for a week.

Peels or Botox should be avoided for six weeks prior to treatment and refrain from taking blood-thinning medications and fish oils to prevent bruising.
